Objective

B.Tech undergraduate in Artificial Intelligence and Machine Learning with hands-on experience in building and deploying end-to-end machine learning solutions. Skilled in Python, SQL, supervised learning, feature engineering, and statistical analysis on large-scale datasets (421K+ rows). Passionate about solving real-world problems through AI and seeking opportunities as an AI/ML Engineer, Data Scientist, or Software Engineer.

Education

Vivekananda Institute of Professional Studies – Technical Campus (GGSIPU)

Delhi

B.Tech in Artificial Intelligence and Machine Learning (AIML) – CGPA: 9.331/10

2023 – 2027

Central Board of Secondary Education

Delhi

Class XII – 78.2% | Class X – 79%

2022 / 2020

Projects

Walmart Sales Forecasting & Anomaly Detection | [Demo](#) | [GitHub](#)

- **Technologies:** Python, XGBoost, Prophet, Scikit-learn, Isolation Forest, Flask, Pandas, NumPy, Bootstrap
- Performed EDA and statistical analysis on 421K rows uncovering key business insights — holiday weeks drive 15–30% higher sales, Store Type A generates 3× revenue vs Type C, and Department is the strongest predictor (feature importance: 29%).
- Built sales forecasting system using ML algorithms (XGBoost, MAE: 3,178) on 355K rows at store-department level and time-series forecasting (Prophet, MAPE: 2.22%) on weekly aggregated data across 45 stores and 99 departments.
- Detected 8 sales anomalies (e.g. Black Friday, Christmas spikes) via Isolation Forest after engineering 14 features with log transformation (MAPE improved 93% → 28.63%)
- Deployed as a Flask REST API on Render with live `/predict` and `/anomaly` endpoints.

Customer Churn Prediction | [Demo](#) | [GitHub](#)

- **Technologies:** Python, Pandas, NumPy, Scikit-learn, Random Forest, SMOTE, Flask, Render, HTML, CSS
- Built an end-to-end ML pipeline using Random Forest with SMOTE for class imbalance handling, achieving 10–15% accuracy improvement over baseline models on held-out test data.
- Compared 5+ ML algorithms (Logistic Regression, Decision Tree, KNN, SVM, Random Forest) and selected optimal model using Accuracy, Precision, Recall, and F1-score evaluation.

Neuro_Scan_AI | *Brain Tumor Classification System* | [Demo](#) | [GitHub](#)

- **Technologies:** Python, TensorFlow, Keras, EfficientNetB4, Transfer Learning, OpenCV, NumPy, Matplotlib
- Developed a deep learning brain tumor classification system using EfficientNetB4 transfer learning trained on 7,200 MRI images across 4 classes (glioma, meningioma, pituitary, no tumor).
- Improved test accuracy to 90%+ through fine-tuning, early stopping, and learning rate scheduling, reducing overfitting and improving model generalization.
- Built complete deep learning pipeline including data engineering, augmentation, preprocessing, model evaluation, and automated prediction for medical imaging analysis.

Technical Skills

Programming & Tools: C++, Python (ML/DS workflows), SQL, Pandas, NumPy, Scikit-learn

Core AI/ML Knowledge: Machine Learning Algorithms, Deep Learning, Data Engineering, Feature Engineering, Mathematics for AI/ML (Statistics, Linear Algebra), Supervised Learning, Time-Series Forecasting, Anomaly Detection, Transfer Learning

Modeling & Evaluation: Model Evaluation, Cross-validation, Statistical Analysis, Data Visualization, Hyperparameter Tuning, EDA, SMOTE

Web & API: Flask, REST API, HTML, CSS, JavaScript (basic)

Tools: Git, GitHub, Jupyter Notebook, Google Colab, VS Code, Hugging Face, Render

Relevant Coursework: Data Structure and Algorithm, Machine Learning, DBMS, OOP, OS, CN

Achievements

Tata Group Data Analytics Job Simulation

June 2026

Completed virtual Data Analytics internship via Forage – Tata Group

Forage

Competitive Programming

Solved 500+ DSA problems across LeetCode, CodeChef, and HackerRank
